GAME CHANGING DESIGN

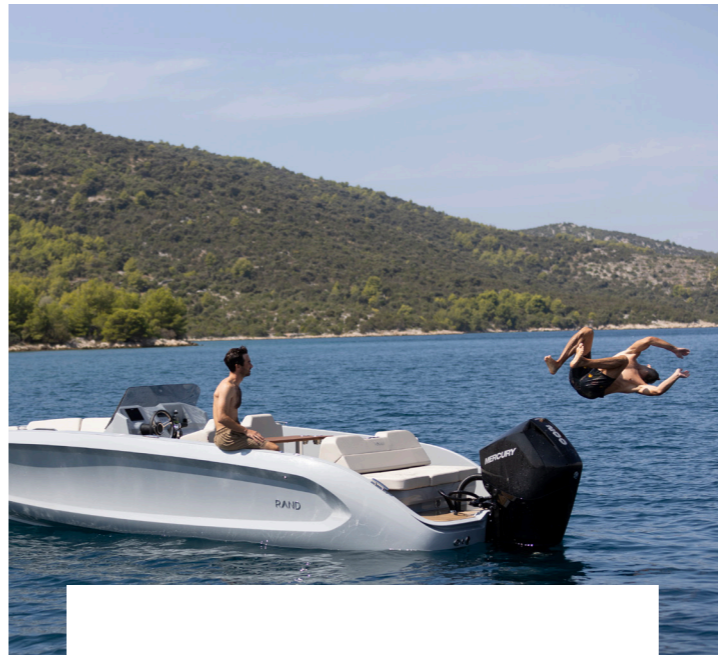

Source 22 represents a new approach to sports console boats using a new design language specifically developed for its segment. The design of RAND Source 22 is inspired by the dynamic curves and A-class surfaces familiar from high-end luxury sports cars, the exterior is a subtle play of shadows and taut surfaces, enhanced on the side by a new design element - the infinite loop. The new Source 22 is a testament to style, functionality and raw performance enhanced by the brand's new game changing design.

RACING PERFORMANCE

The hull design of Source 22 is all about speed and efficiency, that like a race boat are close to 4:1 in length and width, giving it both a sporty race look and performance. With its 22 feet Source 22 is the perfect size for high-speed sailing, where the hull is designed to have the most comfortable and efficient speed at 28 knots with 30% less consumption of fuel and electricity - depending on the engine you choose.

SOCIAL HANGOUT

The pilot backrest can flip forward to create a dining area for 5 people, the adjustable cockpit table can transform into a 200x140cm sun lounge with adjustable backrest to provide optimal seating arrangement for each social situation, and the utility deck can transform into another massive sunbed – usability to provide the best experiences and companionship at sea.

SUSTAINABLE PRODUCTION

Even without an electric engine, Source 22 still has an industry leading green profile in sustainable production because we produce in organic and recycled material. These are not only sustainable but also certified and tested strong materials that have no compromise towards the craftsmanship and long-term preservation of the boat.

MASSIVE STORAGE ROOMS

Source 22 is equipped with two 1000L storage rooms giving massive space for watersport equipment and other things you need for your trip. As a part of the big storage rooms, an optional transportable cooler box gives the flexibility to carry cold beverages from your home directly to the boat and then further to the beach or other destinations you are heading to.

INTERACTIVE COCKPIT

The steering console are created around effortless sailing, giving an extremely user-friendly interface where everything is within reach of the captain. The interactive touchscreen also includes navigation and sailing information such as speed, fuel consumption, light controls etc. As a part of RAND's intelligent boating, the steering console is fully connected to the RAND- app giving you real-time remote access, live updates, GPS fence for thief protection, intelligent AI user modes and much more.

ELECTRIC PROPULSION

With electric propulsion you will get low running cost, almost non-existing maintenance, silent motor, more advanced interface systems, plug-and-play simplicity, and boating with no harm to the environment. The 170kW motor gives you incredible acceleration and a top speed of 45 knots. Combined with a battery capacity on 78kWh you get the opportunity of high-speed sailing, but also a long silent cruise with a range of 30NM with 10 knots cruising speed and 20NM with 20 knots.

PETROL PROPULSION

Source 22 also comes with traditional petrol and diesel engines. You can choose between four different engines, both in- and outboard, from 150 to 250HP. With a tank capacity up to 198L liter you have many hours of sailing with a cruise speed around 28 knots and you can even get a top speed of 50 knots.
